# MarineScheduler Project 1

Muhammad Afiq bin Mohamad
S63755

What is a MarineScheduler?

An intelligent timetable application designed to revolutionize campus life at ABC University:

- Advanced algorithms generate customized timetables based on users' academic needs, course preferences, and extracurriculars
- Real-time synchronization with university systems for up-to-date class timings and room changes
- User-friendly interface enables easy navigation and storage of personal schedules

The goal is to revolutionize the student experience by enabling effortless schedule management tailored to each user.
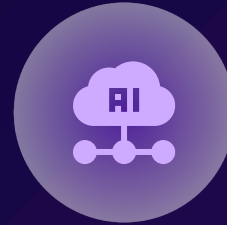

Market Analysis

Problem

Manual scheduling unable to handle thousands of students with customized plans and hundreds of dynamic courses across departments

Solution

Algorithmically generates optimal schedules in seconds and meets all student and institution requirements

Impact

Addresses significant pain point for institutions and improves efficiency and productivity

Monetization Strategies

Subscription Model

- Monthly and yearly premium plans
- Tiers based on features and discounts

Advertising

- Non-intrusive ads in free version
- Targeted and relevant ads

Partnerships

- Integrate academic resources
- Revenue sharing arrangements

Pricing Strategy

Goals

- Long-term profitability
- Maximize affordability and adoption

Tactics

- Tiered plans for flexibility & incentives
- Occasional sales & promotions

Future Plans

- Expand premium features
- Optimize price points for profit
- Maintain user value

Thanks!_
